

Electrical Accessories

The fitment of accessories, additional accessory supply sockets, relays and fuses must only be entrusted to a Jaguar Dealer.

Caution:

- 1. The use of any accessories not specifically designed for this Jaguar will damage the electrical circuits and systems of the vehicle.**
- 2. Under no circumstances must the power supply be obtained directly from either battery terminal.**
- 3. The use of non-approved accessories can reduce the battery capacity and charge period to an unacceptable level, therefore Jaguar cannot accept any liability for the fitment of any such item.**

The cigar lighter socket can be used for plug-in accessories which are only temporarily connected to the vehicle (e.g. car vacuum cleaner).

Electrical Accessory Supply Sockets

Two electrical accessory supply sockets are provided in the following areas:

1. On the passenger side, behind the glove box.
2. In the luggage compartment, clipped near the battery.

Note: Before connecting electrical accessories to these sockets, consult a Jaguar Dealer.

Earth Points

If an accessory needs to be connected to an earth point, consult a Jaguar Dealer.

Caution: Under no circumstances must holes be drilled in the bodywork to accept earth terminals.

7-2 Vehicle maintenance

Accessories	7-1	Capacities	3-9
